

VSK SERIES

Video survival kits – The multitool for videographers

- **Slider** – With the video slider and dolly, smooth tracking shots are easy. An effect that will amaze. Tube length: 680mm, movement: 430mm.
- **Dolly** – The axles on the dollies are adjustable, so that curves and circles are possible. The rolling resistance of the wheels can be adjusted, allowing the tracking speed to be changed.
- **Cage** – Using the cage, it is possible to connect various accessories using a 1/4" connection, such as lamps, microphones, etc., such that everything is moved with the camera.
- **Lowboy** – The lowboy has the same features as the cage, including a top-mounted grip. Using the top grip, breathtaking footage from ground level can be shot.
- **Rig** – All good photo kits need a rig. Mounting the camera and accessories onto the shoulders eases the pressure on the cameraman and steadies the equipment.

simply better.
